

# Mr. MEADOWS' TECHNICAL RESUME

Zachary R. Meadows

June 7, 2018

Sprint 1: Resume

Platform: Windows

Languages: C++, Java, Visual Basic,

x86 Assembly, HTML, CSS, PHP, & Javascript

*The purpose of this project is to create a living resume to show potential employers. I am more interested in back-end development, but am very motivated to learn front-end development as well. By learning front-end development, I expand my knowledgebase and become more versatile in the field of computer programming.*

# SPRINT 1 PLAN

## **Sprint Capacity**

The estimated amount of time available to spend on this assignment: ~2 Days.

## **Personal Commitment**

The amount of time expected to spend on this assignment: ~3.5 hours.

## **Task List with Time Estimates**

1. Read through career guide (~1/2 hour)
2. Edit/update current resume (~1 hour)
3. Add style to resume (~1 hour)
4. Proof-read Resume (~1/2 hour)
5. Turn in assignment and retrospective (~1/2 hour)

## **Issues and Concerns**

One of the main issues concerning the resume is the lack of content in it. With having no relatable computer science experience, the resume will not be very substantial. Another issue concerning the resume is that it is not currently up to date—extra time will need to be committed in order to update the resume.
